

Environmental Specialists

Fulltime and Intern Positions Available

Imagine shaping the future of the world's energy with your talents and expertise, working in an exciting industry that empowers the lives of millions of people and accomplishing more than you ever thought possible.

Who We Hire

We're looking for bright, enthusiastic and highly motivated individuals with two years of experience or less. Candidates should have:

- **Bachelors in Civil Engineering or Chemical Engineering** with an emphasis or minor in Environmental Engineering;
- **Masters in Civil or Chemical Engineering** with an emphasis or minor in Environmental Engineering.

Strong academic performance (3.0 GPA or higher) in core programs combined with excellent communication, leadership, teamwork and problem-solving skills are critical. You should also have the desire and ability to work in both domestic and international locations as new opportunities arise.

What You'll Do

Job responsibilities are varied and diverse. Yet, whatever your job, you'll be part of a team that delivers exceptional performance with respect to health, environment and safety.

Responsibilities of an **Environmental Specialist** may include:

- Advising on environmental regulatory requirements and best practices.
- Developing procedures and guidelines.
- Compiling emissions estimates and reduction studies.
- Modeling.
- Developing environmental impact assessments.
- Preparing control technology assessments.
- Assessing site remediation plans.
- Identifying waste management solutions.
